

THE MODIFY BATON RYUSOKU SOFT HOP UP BUCKING TEST REPORT

Thank you Modify. You make great affordable products for the player. And you do not disappoint.

The modify baton ryusoku soft hop up bucking is an excellent choice for upgrading your stock internals. It makes suck a sweet seal.

I gained 20fps just from the install and my accuracy greatly improved at long range! It's hard to believe how much more effective one part can be.

- Gun Kalashnikov ak47 v3 gear box.
- S100 modify refresher kit – epic!
- Silver wire harness – home made
- Modify baton ryusoku bucking = awesome sauce

Before hop up install 350 fps and a long left drop off that was at times unreliable. After installation of hop up 360 – 365 fps and the straightest shot ever!

The installation is a fun night project that even the novice players should do. It is the best and most affordable on the market that I have seen.

The best part is it is made for the player by the player.

I have always built all my toys and bikes growing up so I can appreciate a well made part that installs smooth with perfect precision.

The best part is when you install a modify product you know your gun will not fail you in battle.

As an avid air softer and mechanic I greatly love modify products for my guns or my team's guns.

Why go into battle with anything less than modify!
For the player by the player!

Thank you modify
Daniel Gentry
